requirements

Equal amount
of usable fuel

FAA SW-17-23, August 24, 2017: Installation of a Crash Resistant Fuel System compliant with FAR § 27.952 is not required to correct an unsafe condition, but such installation will reduce the risk of post-crash fires and improve occupant survivability in an accident.

(1) Except for operations with underbelly installation.

1 A rubber bladder fitted inside an aluminium fairing

2 Double skin fuel lines

3 New vent system roll-over protection

4 New vent system flame arrestor

5 New capacitive gauge fuel transmitter

6 Crash-resistant recessed sump drain valve

7 New fuel pump

A full equipped fuel plate

Easy to install, by customer
or within Airbus Helicopters network
