Order will add to JetBlue's large fleet of Airbus planes

Toulouse, 3 January 2019 – JetBlue Airways has firmed up an order for 60 A220-300 aircraft, the larger model of the new, industry-leading A220 series.

“As we approach our 20th anniversary, the impressive range and economics of the highly efficient A220, combined with the outstanding performance of our existing fleet of Airbus A321 and restyled A320 aircraft, will help ensure we deliver the best onboard experience to customers and meet our long-term financial targets as we continue disciplined growth into the future,” said Robin Hayes, Chief Executive Officer, JetBlue.

JetBlue's existing Airbus fleet includes 193 A320 and A321neo aircraft in operation, with an additional 85 A321neo aircraft on order.

“JetBlue has proven there is no contradiction between economic efficiency and a high quality product,” said Christian Scherer, Airbus Chief Commercial Officer. “Their endorsement of the A220 proves this aircraft meets those two criteria better than any alternative in its segment. Thank you JetBlue and congratulations on this big milestone in your growth.”

The order was completed the last week of December. Airbus will produce the A220-300 aircraft at a new U.S. assembly facility in Mobile, Alabama. Construction of the plant, to be located adjacent to the existing Airbus A320 assembly facility, will begin later this month.

The A220 is the only aircraft purpose built for the 100-150 seat market; it delivers unbeatable fuel efficiency and true widebody comfort in a single-aisle aircraft. The A220 brings together state-of-the-art aerodynamics, advanced materials and Pratt & Whitney's latest-generation PW1500G geared turbofan engines to offer at least 20 percent lower fuel burn per seat compared to previous generation aircraft. With a range of up to 3,200 nm (5020 km), the A220 offers the performance of larger single-aisle aircraft.

With an order book of more than 500 aircraft to date, the A220 has all the credentials to win the lion's share of the 100- to 150-seat aircraft market estimated to represent at least 7,000 aircraft over the next 20 years.
