Press Release

Airbus delivers its first A350-1000 to launch customer Qatar Airways
The carrier shapes the future of air travel with leading A350 XWB widebody fleet

Toulouse, 20th February 2018 – Airbus has delivered the world’s first A350-1000 widebody airliner to launch customer Qatar Airways at a delivery event in Toulouse, France. The aircraft is the first of 37 A350-1000s ordered by the carrier and is the first ever Airbus aircraft fitted with the revolutionary new Qsuite seats, offering the first ever double bed in Business class. Qatar Airways is the world’s largest A350 XWB family customer with 76 aircraft on order and the largest A350-1000 customer.

“Qatar Airways always demands the very best for its customers, so it is right that we are the first airline in the world to fly the Airbus A350-1000,” said Qatar Airways Group Chief Executive, His Excellency Mr. Akbar Al Baker, “This remarkable state-of-the-art aircraft will become a firm part of Qatar Airways fleet and will keep us ahead of the curve, allowing us to continue to offer our passengers outstanding levels of comfort and service”.

The A350-1000 fits seamlessly alongside Qatar Airways’ growing fleet, including 20 A350-900s today. Both aircraft are complementary and provide for maximum commonality with unmatched operating efficiencies and the same unique passenger experience in their Airspace cabin. Flyers will benefit from absolute well-being in the cabin, with more personal space, optimised cabin altitude, more fresh air, controlled temperature & humidity, integrated connectivity and the latest generation of in-flight entertainment system.

Chris Cholerton, Rolls-Royce President – Civil Aerospace, stated “We are very proud to have worked with Qatar Airways and Airbus to deliver engines for this latest version of the A350 XWB family. This delivery marks another significant day in our partnership with the airline and the manufacturer as the new aircraft is powered by the most powerful engine ever developed for an Airbus aircraft, the Trent XWB-97.”

Fabrice Brégier, Airbus, said “It is a huge pride for us to deliver the very first A350-1000 to our launch customer Qatar Airways. Bringing major advantages in fuel and cost efficiency along with unmatched passenger comfort, the A350-1000 is the ideal aircraft to showcase Qatar Airways’ legendary customer service. With its greater capacity compared to the A350-900, the newest widebody will play a major role on the carrier’s busiest long-haul routes and will contribute to strengthen their position at the forefront of the aviation industry.”

The A350-1000 is Airbus’ latest and largest widebody in the twin-aisle category. With a 7-metre longer fuselage, the A350-1000 space for premium cabin products is 40% larger than its smaller sibling the A350-900. In Qatar Airways configuration the A350-1000 offers 44 additional seats. It is a truly long-range aircraft with a range of 8,000nm (14,800 km) at entry into service. The A350-1000 features a modified wing trailing-edge, new six-wheel main landing gears and more powerful Rolls-Royce Trent XWB-97 engines. As with the A350-900, the A350-1000 brings together the very latest in aerodynamics, design and advanced technologies for a 25 per cent step change in operating cost compared to previous generation competitor aircraft.
