World's largest yacht to feature Airbus ACH145 helicopter

REV Ocean will use new ACH145 model to support scientific missions

Monaco Yacht Show, 26 September, 2019 – Airbus Helicopters is to provide the on-board helicopter for the REV Ocean research and expedition vessel – the world's largest superyacht.

The research expedition vessel, which is 600ft (183m) long, is the flagship of Norwegian businessman and philanthropist Kjell Inge Røkke's not-for-profit oceanic research foundation, REV Ocean.

It will carry one of the first examples of the new Airbus ACH145, with five-blade rotor and increased maximum take-off weight.

The yacht, designed by Espen Oeino, has arrived in Norway from the VARD Tulcea shipyard in Romania and will accept the helicopter on board when the aircraft is delivered in 2021.

The helicopter, which can operate from either of two helidecks on the yacht, plays a key role in passenger transport and re-supply as well as its primary scientific mission.

Launched in 2019 and due for certification early in 2020, the new Airbus ACH145 has a bearingless five-blade rotor replacing the existing hingeless four-blade rotor, and provides 150kg additional useful load-carrying capability.

REV Ocean was established as a result of Mr Røkke signing the Giving Pledge campaign in 2017, vowing to give away more than 50% of his fortune to philanthropic causes. Any profit generated is reinvested into the work programme for a healthier ocean.

As well as the ACH145, the vessel is equipped with scientific trawls, sonar systems, laboratories, auditorium and classrooms, moonpool, unmanned aerial vehicle, a remotely operated submarine with 6000 meters depth capacity, and advanced communication equipment. It has a crew of up to 35 and can carry 60 scientists.

Head of Airbus Corporate Helicopters, Frederic Lemos, said: "It is a true privilege to have our helicopter selected by REV Ocean for this prestigious project. We very much look forward to playing our role in advancing the important work being carried out by Kjell Inge Røkke and his team."

REV Ocean CEO, Nina Jensen, said: "We are delighted to be getting the ACH145 helicopter from Airbus. This will allow us to support our science operations and transport our passengers with the highest levels of safety, efficiency and environmental standards."
