“One Atlas” – Airbus Defence and Space Launches the World’s Freshest Satellite Image Library

Airbus Defence and Space has launched One Atlas, a new satellite image basemap, which covers the earth landmasses with professional grade imagery. Available online 24/7 and refreshed within a 12-month period, One Atlas provides customers with easy access to cost effective, high-quality and homogeneous imagery.

One Atlas will bring value to all our clients for a wide range of applications such as military operations planning, infrastructure preparatory studies or even tree cover change detection in regions prone to deforestation, just to name a few.

The service offers a streamlined workflow, and the costs related to updating, selecting, processing and hosting imagery are drastically reduced. Seamlessly integrated into the customer’s system, One Atlas facilitates the sharing of data across teams or partner organisations, with no compromise on security or privacy. It also enables users to plan, map and locate their teams, assets or areas of interest, anywhere on the globe, allowing operators to devote more time to their core mission.

“With One Atlas, we propose a radical change to our clients for the way they access our data”, said Bernhard Brenner, Head of Intelligence Business Cluster at Airbus Defence and Space. “We take care of everything: updating, selecting, processing and hosting – all to make it easier, cheaper and faster for our customers”.

About Airbus Defence and Space

Airbus Defence and Space, a division of Airbus Group, is Europe’s number one defence and space enterprise and the second largest space business worldwide. Its activities include space, military aircraft and related systems and services. It employs more than 38,000 people and in 2015 generated revenues of over 13 billion Euros.
