Toulouse, 2 June 2022 – Airbus is taking steps to strengthen and grow its cybersecurity activities throughout the Group. The company will showcase its cybersecurity solutions at the International Cybersecurity Forum (FIC) from 7th to 9th June 2022 in Lille (France).

With the exponential cyber threats, along with the increasing digitalisation and connectivity of its products and systems, cybersecurity has become a strategic and pivotal component of Airbus' development and future. The company has therefore undertaken a series of actions and investments to further develop and strengthen its cybersecurity capabilities and expertise, ensuring the best possible protection for the company, its ecosystem, and its customers.

Thus, Airbus has decided to combine its existing Company-wide cybersecurity services activities in a single organisation which will go live on 1st July 2022. The new organisation, which will focus on cybersecurity and safety services especially in the industrial sector, will bring together more than 1,000 experts based in France, Germany, the UK and Spain. It will provide a unique global service offering to protect the Group and meet the needs of national authorities and commercial customers including critical infrastructures.

Besides these services activities, cybersecurity teams dedicated to large projects will develop further their expertise and business for defence and space customers and programmes. 400 experts will contribute to major integration projects in France, Germany, UK and Spain around high-level technologies such as cyber defence and cryptography.

Furthermore, Airbus has recently acquired DSI, a Germany-based company certified by the Federal Office for Information Security (BSI) that provides cryptography and communication systems for the space, airborne, naval and land sectors.

For its cybersecurity products, Airbus has just launched a double-digit million euros investment plan - mostly focused on R&D activities - in its Stormshield subsidiary. The company, which gathers 400 experts and offers data, endpoint and network security solutions will increase the capabilities and performance of its product lines and accelerate the development of its international activities.

Within a fast-paced sector where the turnover of employees is high, Airbus continues to invest in talents, having recruited several hundred cybersecurity experts in recent years and foresees an increasing need of cyber skills at all levels. Among many initiatives in this domain, Airbus
