Method 1 is described as automated titration with Sodium- thiosulphate as reagent and a calculation factor of 1,73. Method 2 is described as manual analysis, it uses Iron(II)Sulphate and calculates with a factor of 6,95. Both methods are fully equivalent in the calculated result. What exactly is the problem for T+H? Do they want to know, if they are allowed to use an automated titrator? Yes, they can, if they use Thiosulphate and calculate with 1,96."	02 Surface treatments	02-05 Phosphating chromate conversion passivation	30/09/2020	28/07/2021
