Toulouse, 1 November 2023- Brussels Airlines, Belgium's national airline and member of the Lufthansa Group, has taken delivery of its first out of five new A320neo aircraft.

The A320neo is part of the airline's fleet renewal strategy to operate the latest state of the art, efficient aircraft in order to meet Brussels Airlines' ambitious sustainability targets.

The A320neo incorporates the latest technologies, including new-generation CFM International LEAP-1A engines for more efficiency and Sharklets for improved aerodynamics, which together reduce fuel burn and CO₂ emissions by at least 20 per cent. The aircraft is also a good neighbour at airports with a 50 per cent lower noise footprint compared to previous generation aircraft.

The Brussels Airlines A320neo features a single class layout with 180 seats. Equipped with the Airbus Airspace cabin, the A320neo will take the passenger experience to new highs in comfort, ambience and service. Unique and customisable lighting sets the mood for all phases of the flight, maximising passenger relaxation in the widest and quietest cabin in its class.

The new A320neo will join Brussels Airlines' all Airbus fleet of 43 aircraft, including 34 A320 Family aircraft and nine A330-300s. Perfectly sized for the European market, the new aircraft will enter into service on the carrier's short- to medium-haul network.

With over 9,700 orders from more than 130 customers worldwide, the A320 Family is the world's most popular aircraft.
