

Press Release

Third H160 prototype joins the flight test campaign

First prototype equipped with a cabin interior and with a configuration closer to the serial definition

Marignane, 13 October 2017 – The third H160 prototype (PT3) performed its maiden flight at the company’s headquarters this afternoon. PT3, with its cabin interior configuration similar to that of a serial aircraft, will contribute to certification activities and flight testing to ensure the aircraft’s level of maturity ahead of entry into service in 2019.

“The third prototype incorporates a significant amount of modifications based on feedback resulting from the first two years of testing by development, production and support teams” said Bernard Fjarski, Senior Vice President, Head of H160 programme. “It plays an essential role in delivering a mature aircraft at entry into service and it is also closer to the serial definition with its interior lining and transport cabin configuration” he added.

The first two prototypes have clocked more than 500 flight hours since the model’s maiden flight in June 2015. In that time, the flight envelope has already been fully tested and the domain has been opened. The remaining development activity, for example complementary hot weather testing, antennas, and optional equipment will be done using all three aircraft.

The helicopter’s final assembly line in Marignane is in the final stages of preparation and will be ready to start serial production shortly. Customer support activities are being prepared in parallel thanks to the extensive involvement of maintenance teams, through the “operator zero campaign”, using the prototypes and test means to check and improve the maintenance plan, digital work cards and technical documentation, and tooling etc. ahead of actual operations.

The first version to enter service in 2019 will be the passenger transport one – commercial air transport or Oil and Gas, followed by the emergency medical services (EMS) version.

About Airbus

Airbus is a global leader in aeronautics, space and related services. In 2016 it generated revenues of €67 billion and employed a workforce of around 134,000. Airbus offers the most comprehensive range of passenger airliners from 100 to more than 600 seats and business aviation products. Airbus is also a European leader providing tanker, combat, transport and mission aircraft, as well as one of the world’s leading space companies. In helicopters, Airbus provides the most efficient civil and military rotorcraft solutions worldwide.
