

## Press Release

### JetBlue Airways to add A321XLR and additional A220s to its fleet

@JetBlue @Airbus #A321XLR #A220 #ParisAirShow #PAS19

**Le Bourget, 20 June 2019** – JetBlue Airways will add the A321XLR to its already large fleet of Airbus aircraft and increase its existing order for Airbus A220s. JetBlue has contracted to convert 13 existing A321neo orders into firm orders for the new A321XLR, which Airbus revealed this week at the Paris Air Show. Also, JetBlue has firmed up an order for an additional 10 A220-300 aircraft from existing options.

JetBlue, a New York-based low-cost airline that differentiates itself with a high-quality passenger experience, will integrate the A321XLR and the A220-300 into its growing network of routes to a variety of key destinations. JetBlue now operates 193 A320 and A321 aircraft, has orders for 85 A321neos, and previously ordered 60 A220-300s. In April, JetBlue converted 13 A321neo aircraft in its existing order to the LR (long range) version.

The A321XLR is the next evolutionary step from the A321LR which responds to market needs for even more range and payload, creating additional value for the airlines. From 2023, it will deliver an unprecedented Xtra Long Range of up to 4,700nm – 15% more than the A321LR and with 30% lower fuel burn per seat compared with previous generation competitor aircraft. This will enable operators to open new world-wide routes such as India to Europe or China to Australia, as well as further extending the Family's non-stop reach on direct transatlantic flights between continental Europe and the Americas. For passengers, the A321XLR's new Airspace cabin will provide the best travel experience, while offering seats in all classes with the same high-comfort as on a long-haul wide-body, with the low costs of a single-aisle aircraft.

The A220 is the only aircraft purpose-built for the 100-150 seat market. It delivers unbeatable fuel efficiency and widebody comfort in a single-aisle aircraft. The A220 brings together state-of-the-art aerodynamics, advanced materials and Pratt & Whitney's latest-generation PW1500G geared turbofan engines to offer at least 20 percent lower fuel burn per seat compared to previous generation aircraft.
