

### **ACJ debuts Harmony cabin concept for VIP widebodies**

Provides productive practicality for the longest flights

**Toulouse, 28 May 2018** - Airbus Corporate Jets (ACJ) has created a new cabin design concept, called Harmony, which combines the comfort and space of a widebody cabin with the practicality to suit the longest of flights.

Harmony seamlessly combines the benefits of Airbus Corporate Jets' VIP widebodies – such as comfort, space and quietness - to produce a consistently harmonious customer experience. It builds on the Airspace cabin brand from the Airbus airliner family.

Initially proposed for the new ACJ330neo Family<sup>1</sup>, which features new-generation engines and Sharklets, Harmony can also suit other Airbus widebodies, such as the ACJ350 XWB.

“Long-haul flights provide time for productive work and socialising, as well as rest, and ACJ's Harmony cabin concept is wonderfully well designed to enable all of these, while bringing the world within a single flight,” says ACJ President Benoit Defforge.

“Harmony is a timeless and elegant design concept, because we dare to break the conventions that are traditionally imposed on us as cabin designers. Our creativity needs to be unique to fit the needs of our customers, as befits a host receiving their guests in their ‘world above the world,’” says ACJ Head of Creative Design Sylvain Mariat.

A holographic globe, showing aircraft position, greets entering passengers. Turning left leads to the master bedroom, office and bathroom, while turning right brings travellers into a spacious lounge with seating grouped at round-tables that encourage social interaction.

Concentric circles, like ripples on a pond, are a feature of the cabin layout.

Just beyond the lounge is a conference table, and beyond that there are four VIP guest-suites - each featuring an office that converts to a bedroom, plus an ensuite bathroom with shower.

Seating for support staff and a galley make up the rear of the cabin, which can be adapted to serve both private and government customers.

Airbus aircraft have the distinction of being the world's most modern and comprehensive family. All of the corporate jet versions have intercontinental capability, with some - such as the ACJ330neo and ACJ350 XWB Families – going beyond to deliver “nonstop to the world range”.

Airbus corporate jet customers benefit from airliner-reliability and a worldwide support network - sized to serve more than 10,000 aircraft and over 500 customers and operators - plus services tailored to their specific needs.

These services include the “one call handles all” corporate jet customer care centre (C4you), customised maintenance programmes and the ACJ Service Centre Network.
